**JLEN invests in a diversified portfolio of operational environmental infrastructure projects generating predictable and stable revenues. It aims to provide investors with a sustainable dividend paid quarterly, that increases progressively in line with inflation, and to preserve the capital value of its portfolio.**

- Environmental infrastructure is infrastructure projects that utilise natural or waste resources or support more environmentally-friendly approaches to economic activity. This could involve the generation of renewable energy (including solar, wind, hydropower, anaerobic digestion and biomass technologies), the supply and treatment of water, the treatment and processing of waste, and projects that promote energy efficiency
- The current portfolio includes 24 onshore wind, PV solar and waste, waste water processing and anaerobic digestion projects in the UK
- All projects have long-term, predictable, wholly or partially inflation-linked cash flows supported by long-term contracts or stable regulatory frameworks
- JLEN plans to invest in further environmental infrastructure projects with well-established technologies and demonstrable operational performance located in OECD countries with stable and well-proven regulatory and legal frameworks
- No more than 15% of the net asset value will be attributable to projects in construction and not fully operational
- At least 50% of the portfolio by value will be based in the UK and no single project will represent more than 30% of the net asset value after acquisition
- JLEN is targeting a net IRR of 7.5% to 8.5% over the long term

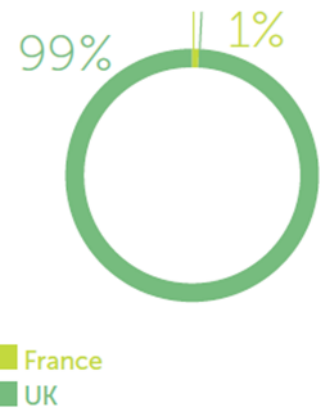

### Investment proposition

- JLEN aims to pay investors a sustainable dividend per share paid quarterly, that increases progressively in line with inflation, and to preserve the capital value of its portfolio
- JLEN provides investors with exposure to a diversified portfolio of environmental infrastructure projects generating predictable, wholly or partially inflation linked cash-flows
- Investment in renewable energy projects is supported by a global commitment to support low-carbon electricity targets
- Potential upside to asset value comes from active management of the projects and the ability to invest in further environmental infrastructure projects at attractive prices
- It has a First Offer Agreement over a pipeline of environmental infrastructure projects currently worth an estimated £260 million owned by John Laing

### Portfolio value split by sector

### Portfolio value split by geography
